

[illegible]

1. The theory of the origin of life is a very old one. It has been the subject of much speculation and debate. The first step in the process of life is the formation of the first cell. This is a very difficult task, as it requires the presence of all the necessary components of life. The second step is the development of the first organism. This is also a very difficult task, as it requires the presence of all the necessary components of life. The third step is the development of the first multicellular organism. This is also a very difficult task, as it requires the presence of all the necessary components of life. The fourth step is the development of the first complex organism. This is also a very difficult task, as it requires the presence of all the necessary components of life. The fifth step is the development of the first intelligent organism. This is also a very difficult task, as it requires the presence of all the necessary components of life.

1. It is a very common disease in the tropics and subtropics. It is caused by a parasite which lives in the blood. The parasite is called the malarial parasite. It is a very dangerous disease and can be fatal if not treated.

2. The symptoms of malaria are fever, chills, and sweating. The fever is usually accompanied by a headache and a general feeling of weakness. The chills are usually accompanied by a shivering and a feeling of cold. The sweating is usually accompanied by a feeling of heat and a general feeling of weakness.

3. The malarial parasite is transmitted from one person to another by a mosquito. The mosquito is called the malarial mosquito. It is a very common mosquito in the tropics and subtropics. It is a very dangerous mosquito and can be fatal if not treated.
